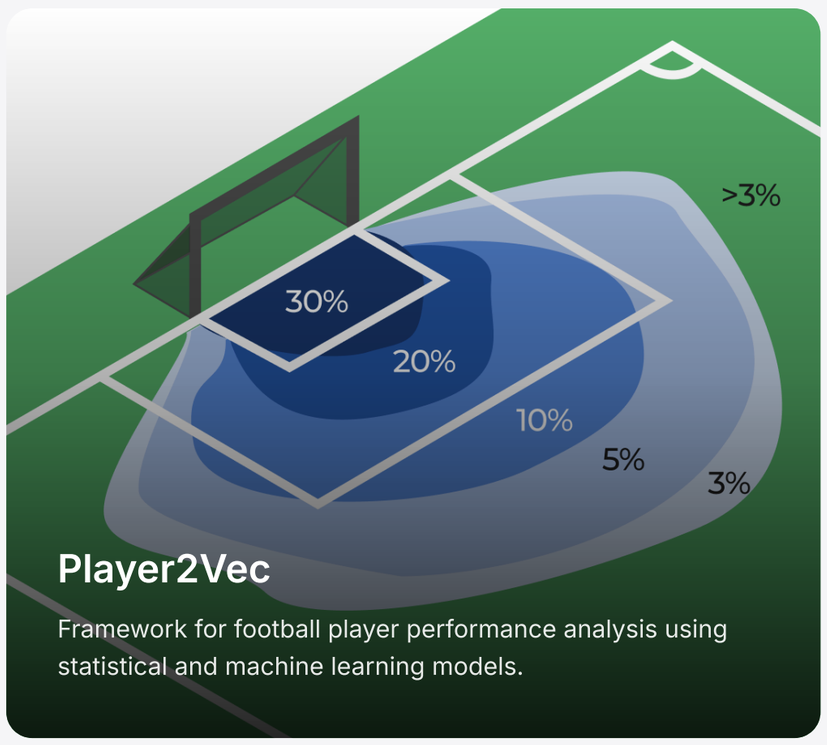
EN / ES 🌙

about me.

I'm Juan Ignacio Silvestri, a Digital Technology **graduate from Torcuato Di Tella University**. I'm interested in working at the intersection of **technology, data, and quantitative modeling**. I enjoy building tools and models that help understand complex systems and support better decision-making. My background includes **software development, data science, mathematical modeling and operations research**. Currently, I'm exploring applications of these methods in areas such as sports analytics, economics, and decision optimization.

projects.



experience.

MAR 2024 — PRESENT

Research Assistant (Operations Research) @ UTDT

Developing high-performance computational solutions for complex variants of the **Vehicle Routing Problem with Time Windows (VRPTW)** in collaboration with **Mercado Libre**. Implemented state of the art **metaheuristics in C++** to optimize large-scale logistics operations.

FEB 2025 — PRESENT

Research Assistant (Machine Learning) @ UTDT

Developed the **Player2Vec** project, a framework for football player performance analysis. Based on **Machine Learning models** to process complex spatial-temporal data, enabling advanced statistical scouting and player evaluation for professional environments.

MAR 2024 — MAY 2025

Teaching Assistant @ UTDT

Facilitated learning through weekly problem-solving sessions, coding labs, and student mentorship across undergraduate and graduate programs:

- → **Algorithms and Data Structures** (Undergraduate): Focused on complexity analysis, sorting/searching algorithms, and efficient data organization.
- → **Computational Applications in Business** (Undergraduate): Solving management problems using Python and quantitative modeling.
- → **Fundamentals of Algorithms** (Master in Management + Analytics): Teaching core algorithmic logic and Python programming for business analytics professionals.

OCT 2022 — JUN 2023

Mobile App Developer @ Municipality of San Luis

Developed new features for the **SIGEM** municipal management app, enhancing digital services for the local government.

MAR 2020 — JUN 2020

Freelance Developer

Designed and launched **Trackalories**, a mobile application that reached over **30,000 downloads**. It enabled users to track consumed calories by taking pictures of their consumptions.
